Notification for IEI R&D Grant-in-Aid

Volume 9 | Issue 9 | September 2024

To promote appropriate technology, assist in building up design & research talents and, most importantly, to help in nurturing potential R&D venture amongst engineering students pursuing Diploma/UG/PG/PhD courses. The Institution of Engineers (India) had instituted the R&D Grant-in-Aid program way back in 2001.

Every year, the Institution invites applications for funding industry-oriented R&D projects and research initiatives aimed at improving the life-style of common people from engineering students pursuing full time Diploma/UG/PG/PhD engineering program in AICTE/UGC/NAAC approved Institutions / Colleges / Universities. The application form and guidelines are available in our website <https://www.ieindia.org>. The projects should be carried out under the guidance of faculty members who are Corporate Members of IEI. Membership criteria for student(s), guide(s) and institution(s) are as follows:

Project Category	Student/Applicant Membership	Guide(s) Membership	Institutional Membership
1. Diploma	Exempted [Membership of Student Chapter is desirable]	AMIE/MIE/FIE	Not Mandatory
2. UG (BE/BTech/ Equivalent)	'Student Member' (SMIE)	AMIE/MIE/FIE	Applicant's Institute should preferably be an Institutional Member with NBA/NAAC Accreditation or valid NIRF Rank
3. PG (ME/MTech/ Equivalent)	AMIE/MIE/FIE	MIE/FIE	Applicant's Institute should preferably be an Institutional Member with NBA/NAAC Accreditation or valid NIRF Rank
4. PhD	AMIE/MIE/FIE	MIE/FIE	Applicant's Institute should preferably be an Institutional Member with NBA/NAAC Accreditation or valid NIRF Rank

The soft copy of the duly filled-up applications (in editable format), as per the proforma available on our website www.ieindia.org, should be sent through email to research@ieindia.org and one printed copy of the same should reach the following address:

The Deputy Director (Technical)

The Institution of Engineers (India)
8 Gokhale Road, Kolkata 700 020

Kindly go through the guidelines (visit link: <https://www.ieindia.org/webui/IEI-Activities.aspx#RnD-Initiative>) before filling up the application.

Title of Chapter: Biometric Object or Facial Detection, Identification and Recognition System using Python and Deep Learning Models

Chapter 22, Sustainability in Digital Transformation Era: Driving Innovative & Growth, CRC Press, London, 1st Edition, 29 August 2024, eBook ISBN: 9781003534136

DOI: <https://doi.org/10.1201/9781003534136-22>

Co-authors : Ghanshyam Yadav, Ravi Kalra, Irfan Khan, Pradeep K. Chandra, Abhishek Kaushik & Ashish Parmar

Abstract: This research paper is focused on creating an automated attendance system for colleges, institutions, organizations and universities with the help of image processing, deep learning, objects or facial detection, identification and recognition techniques. Many colleges, institutions and organizations have implemented object or facial detection, identification, recognition and attendance system but often it fails in different lighting conditions and very often give false positives. Many false positives also happen because objects or facial detection, identification and recognition techniques cannot differentiate between identical twins or in case of change in appearance.

To tackle these issues, HOG (histogram of oriented gradients) algorithm as feature identifier (for the face detection phase), descriptor with SVM (support vector machine) algorithm and recognition phase by CNN (convolutional neural networks) deep learning model. HOG works much better with SVM and gives higher accuracy in different lighting conditions. This research paper still cannot differentiate identical twins, but this research paper has found a way to take their attendance using multiple cameras and at different angles and also in case of change in appearance, hairstyle [5][7].

This paper delves into the fascinating world of image identification, classification, and recognition. We'll be harnessing the power of advanced CNN with the ever-reliable TensorFlow Framework. Python takes center stage here, thanks to its impressive array of libraries such as Dlib, openCV, and TensorFlow. CNN proves to be the ultimate technique for training and testing data, consistently delivering outstanding results in facial detection, identification, and recognition. Accuracy, precision, recall, and time-space complexity are all carefully evaluated. With advanced CNN models, we're achieving remarkable results of over 98%, leaving others in the dust with their subpar sub-90% accuracy.

Co-authors : Pawan Kumar Singh Nain & Kaushalendra Kumar Dubey

Abstract: Numerous recent reports indicate that buildings account for more than forty percent of total energy consumption. A major cause of the current energy crisis is the proliferation of HVAC systems that consume a disproportionate amount of power. In this paper, a review of the thermoelectric cooling systems fitted in the building to reduce its thermal load is presented. This begins by discussing the fundamentals of thermoelectric module (TEM). The factors that improve the system's performance are discussed. Then, the incorporation of thermoelectric cooling systems into the structure and its benefits in terms of energy consumption are discussed. Thermoelectric technology applications are expected to become increasingly more prevalent as new materials emerge on the market with improved levels of efficiency.

Abstract: On 25 September 2015, 193 members of the United Nations General Assembly adopted the 2030 Agenda for Sustainable Development, which comprises a set of 17 sustainable development goals (SDG) with 169 specific targets. Out of the 17, Goal 7 is for ensuring access to clean and affordable energy, which is crucial for the development of all pillars of the society, viz. agriculture, business, communications, education, healthcare and transportation. Generation and consumption of energy is one of most dominant contributor to climate change, accounting for around 60% of total global greenhouse gas emissions, thus having a direct linkage with Goal 13, which focuses on climate action. Warranting universal access to affordable energy (electricity) by 2030 needs propagation of clean energy sources such as solar, wind, biomass, micro-hydro and geo-thermal, which, perpetually, requires expansion of infrastructure and upgradation of technology to supply clean energy in affordable and sustainable way, with least carbon foot-print, across the globe, for which, holistic energy transition policies for regional, national and local levels are essential. The underlying challenges are many, as the energy transition policies cannot be same for all corners of the globe, that is, it would be different for developed and developing countries, as well as for different geographical regions. This poses a critical challenge towards achievement of 'Net Zero', particularly for those countries, such as India, where per capita energy consumption is much lower (and yet to reach the point of saturation) than USA, European Union, Australia or China, and whose primary & predominant source of generation of electricity is though the route of combustion of fossil fuels, and that needs gradual phasing down, not sudden phasing out, as that would lead to acute energy shortage, because of gross disproportionate between energy consumption versus number of consumers. Therefore, the formulation of effective and sustainable energy transition policy must be country specific to strike a balance between SDG 7 and 13.

Title of Chapter: Behavior of Bridge Abutment Foundation in Mixed Ground Condition

Proceedings of the Indian Geotechnical Conference 2022, Volume 2, Lecture Notes in Civil Engineering 477, 06 May 2024, pp 219–227, ISBN: 978-981-97-1740-8, ISBN: 978-981-97-1741-5 (eBook), ISSN 2366-2557, ISSN 2366-2565 (electronic)

DOI: https://doi.org/10.1007/978-981-97-1741-5_19

Co-authors : Sibapriya Mukherjee & Ankit Som

Abstract: Bridges are prime components of transportation network. Subsoil conditions, water table depth, and seismicity have crucial impact on the foundation part of a bridge abutment which may mainly consist of pile or open foundation. Hence, it is necessary to study the effect of soil–structure interaction of bridge foundation under seismic force. To study the nonlinear behavior of bridge abutment and its foundation, different sets of soil models with various seismic forces have been developed by using FEM-based software for a typical bridge abutment foundation. To gain an insight into the seismic response of abutment foundation, its geometrical profile has been further modeled for both pile and open foundations. Different surrounding subsoil conditions (soft soil, weathered rock, etc.) provide variation in safe bearing capacity, ground settlement, stability factor, etc. The results of the present study show that the factor of safety of the bridge abutment gradually increases by 4–12% and ground settlement decreases by 6–16% when ground condition changes from medium to stiff clay followed by weathered rock. Ground settlement increases by 30–135% when seismic zone changes from Zone-III to Zone-IV with higher PGA, even for same soil condition.

Abstract: *Within the last decade, cloud computing and the Internet of Things (IoT) have become inseparable parts of our everyday lives. In recent years, several use cases have been developed among academia, government agencies, industry, and industry groups across various sectors: transportation, building, manufacturing, the distribution grid, farming, and healthcare. The cloud and IoT computing paradigms utilize a geographically distributed network of smart devices to collect large amounts of data and automate the entire ecosystem of connected devices.*

Title of Paper: **Spatiotemporal Variation of Water Quality in the Context of Suspended Particulate Matter in Laguna Mar Chiquita Lake, Argentina using ACOLITE**

Abstract: *This study investigates seasonal variations in water quality at Laguna Mar Chiquita Lake, Argentina, by employing remote sensing techniques to analyze Suspended Particulate Matter (SPM) which offers valuable insights into the lake's environmental health. Landsat 8-9 OLI/TIRS data from 2014-2023 was utilized for spectral analysis of water quality, processed using ACOLITE software for accurate quantitative data. Results show SPM concentrations ranging from 0.823 to 44.172 mg/l, with significant seasonal variations. Higher SPM concentrations post-monsoon indicate increased anthropogenic influence, particularly in the northern area. Pollution from tourism and industrial activities is lower pre-monsoon but spikes post-monsoon and during monsoon, suggesting unfavorable conditions. Effective management and continuous monitoring are crucial for maintaining lake quality and ecosystem health.*

Title of Paper: The Conjoint Effect of Lab-Grown Nano-Graphene Dispersant and Omega-9 Fatty Acid Surfactant on Performance of CI Engine

Abstract: This article aims to assess the performance characteristics of lab-grown graphene nanoparticles via electrolytic exfoliation as nano additives in engine oil. Physical characterization confirmed the morphology and purity of the prepared graphene nanoparticles. Nanolubricants were prepared at 0.1%, 0.2%, and 0.3% volume fraction of the nanoparticles with the addition of oleic acid as surfactant. Measurements of density and viscosity for the nanolubricants were recorded at varying concentrations and temperatures. The performance parameters of a 4-stroke single-cylinder compression ignition (CI) engine were computed using the formulated nanolubricants. The emission of toxic gases into the environment post-engine performance evaluation was also analyzed for different formulations of nanolubricant samples. Results showed that the relative viscosity variation with concentration for the experimental data was in well agreement with other available predictive models. The nanolubricant with 0.1% concentration yielded a reduction of $13.96 \pm 0.39\%$ in total fuel consumption (TFC), a reduction of $5.55 \pm 0.17\%$ in brake-specific fuel consumption (BSFC) and an augmentation of $3.96 \pm 0.13\%$ in brake thermal efficiency (BTE) in comparison to plain engine oil and other prepared formulations. Also, a marginal reduction in emission of exhaust toxic gases i.e., $(2.13 \pm 0.1\%)$ ppm in NOx and a significant maximum reduction of $7.46 \pm 0.2\%$ in smoke opacity has been obtained with 0.1% nanolubricant sample as compared to other test samples. The results from the present study may be useful for developing sustainable nanolubricants for environmental viability and energy savings.

Procedia Computer Science, Elsevier, 237, 31 May 2024, pp 147-154, Online ISSN: 1877-0509

Co-author : Mahesh Shirole

***Abstract:** Cloud computing offers an excellent platform for sharing information and services among departments, partners, customers, and other parties. To ensure the effectiveness of a cloud deployment, it is imperative that resources and data are available in a secure and efficient manner. The protection of personally identifiable information (PII) is a critical requirement for many organizations in order to prevent unauthorized disclosure of that information. In spite of the fact that private information may not be stored within an authorized organization, it can still be protected. It has been shown in recent literature that anonymity can be used to preserve PII privacy. The current methodology for anonymous access is based on certificates rather than subject identity or attribute-based encryption. Identity-based access control is inflexible and violates privacy laws. Access to a certificate can be linked using a certificate that poses a risk of re-identification. The types of objects that can be encrypted by attributes are limited.*

To preserve the privacy of attributes set of subject and object, we extend the attribute-based access control (ABAC) model by expressing privacy requirements with anonymous access. It inherits several characteristics from ABAC, including fine-grained authorizations, unlimited object types, policy flexibility, and object privacy. ABAC-PA² uses homomorphic attribute-based signature (HABS), a secure anonymous access framework that enhances ABAC's identity-less and incorporates privacy-preserving principles by assigning privacy levels to resources.

Air Ticketing through Travel Agent

IEI Corporate Members can access benefits of Corporate Air Ticket program, facilitated by M/s Ebix Travels Pvt Ltd. at a service charge. Details may be accessed at <https://www.ieindia.org/webui/IEI-AirTickets.html>

Discount at the Samsung e-store for IEI Corporate Members

Exclusive access to the Samsung e-store for IEI Corporate Members. This shall enable the Corporate Members to procure the Samsung Products in a discounted rate. The Samsung e-store can be accessed at www.samsung.com/in/multistore/iei using your Membership No. and email id/Mobile.

We would like to thank our erudite members for sharing their professional achievements through the IEI Epitome and making the content more abounding and at the same time inspiring many others to share their accomplishments as well. To streamline the process and make it convenient for the member to give their inputs we would like to obtain the information in a more structured and comprehensive manner. We would request our members to send the details of their achievements as per the appended formats only.

Notification for Advertisement in IEI Epitome

Volume 9 | Issue 9 | September 2024

The Institution of Engineers (India) reserves a coveted privilege in being the largest multi-disciplinary professional body of engineers encompassing 15 engineering disciplines with a Corporate membership of over 2.57 lakhs maintaining a national/international presence through hundred twenty four Centres and six Overseas Chapters, Fora's and Organ (Engineering Staff College of India). The Institution has been disseminating the various information through IEI-Epitome and other publications.

We would like to share with you that we are now providing the facility to advertise engineering / technical products/services, information brochure, recruitment notices etc. in our official publication portal IEI Epitome (12 issues-140000 reach online). Besides, IEI Epitome is also uploaded on our website (www.ieindia.org) on a monthly basis and is accessible to all free of cost. Given its immense footprint in the engineering and technical diaspora spanning the globe, IEI with its distinguished heritage of a century provides you the ideal portal to connect with the National and International Engineering and Technical Community at very competitive rates. We invite you to take this unique and privileged opportunity to advertise and communicate your service and product portfolios under our prestigious banner and make us your brand emissaries in your promotional campaigns.

The booking form containing details of each publication, rates for the advertisements and the advertisement form are appended below.
